Privacy Policy — BlueGenji Bot

Last updated: 13 November 2026

*Copy of the text published at https://bluegenji-esport.fr/en/privacy-policy-bot, **which prevails** in case of any discrepancy. Do not edit this file by hand: it is regenerated from the website (lib/shared/bot-legal-content.ts in AppBlueGenji).*

This policy informs you of the data processed by the Discord bot **BlueGenji Bot**, why it is processed, how long it is kept, who receives it and what your rights are (Articles 13 and 14 GDPR).

01. Data controller

The data controller is the association **Bluegenji Esport**, a French non-profit association under the law of 1901 whose registered office is at 4 impasse des Cyprès, 51210 Janvilliers, France. It has put **Keryan Houssin**, the website's technical host, in charge of receiving requests about your data; this person is not a data protection officer within the meaning of Article 37 GDPR. The means of contacting them are listed in the Contact section.

The Bot is intended for people aged 15 or over (Terms of Service).

02. Data processed and purposes

Relayed advertisements

ID of the original message and of its author, date, IDs of the relayed copies and of their channels: they are used to relay the advertisement, to pass on its edits or deletion, to apply the cooldown between two advertisements, for the message count of **/stats**, for the bot's dashboard statistics and, on an exclusion, to find and remove the copies of the excluded user's advertisements. **Message content is not stored in the Bot's database**: it is copied, with its author's name, into the channels of partner servers, where their members read it. These copies are Discord messages: deleting the original advertisement within 7 days also deletes its copies; after that, they remain until the administrators of the server holding them delete them.

Scrims and recruitment

For the **/scrim** and **/recrute** commands: author ID, game, level or role sought, server and date, which feed the activity statistics (**/stats** command, which only shows each user their own activity, and the bot's dashboard). After 30 days these rows are folded into plain counts per day, server and level (or role), without the author's ID; these counts are kept with no time limit, as a history of the Bot's activity. The level (Débutant, Intermédiaire, Avancé) and the role (Tank, DPS, Heal, Coach, Manager) are chosen from a closed list; a value typed as free text before this rule has been mapped onto the list choice it named exactly, and otherwise replaced with "unspecified", including in the per-day counts.

Relay exclusions

IDs of the excluded user and of the moderator, date, and a reference to the log message holding the reason. The IDs of the excluded user and of the moderator, and the reason, are posted in the staff's private log channel; the reason is also sent by direct message to the Bot's owner. When the excluded user posts an advertisement (a message naming a service) in a relayed channel, the Bot copies the reason to them by direct message, at most once a day; it keeps the ID of that message and the time of the last attempt to send it, and a new notice replaces the previous one, deleted before sending when Discord allows it (otherwise by the nightly purge, section 03; a notice that Discord refuses to delete remains). These messages are deleted, in the channel and in the direct messages alike, when the exclusion is lifted (section 03, which details the case of an exclusion issued before this rule). An exclusion applies to the **whole network** of partner servers: this is community moderation, decided (**/ban-user-of-this-server**, **/ban-user-of-another-server**) and lifted (**/unban**) by the administrators — and the holders of the Bot administration role — of any server with at least

50 members (bot accounts included) where the Bot is installed, as well as, from those same servers, by the Bot's owner and the association's presidency; the association's servers are exempt from this threshold (« Relay moderation » section of the Terms of Service). The **/ban-list** command therefore shows the full list of network exclusions (usernames, reason, date, ID) to the administrators of any server where the Bot is installed — including a server one creates oneself to invite it — and to the holders of the Bot administration role, so that they know who can no longer post through the Bot and why.

Memberships and scheduled reminders

- **Association memberships** (commands restricted to the association's servers): when a member's membership is validated, the Bot sends them the confirmation by direct message, with the membership certificate if one is attached, without keeping it; it then records a reminder for the membership's expiry date — which means keeping, until that reminder, the fact that this member belongs to the association and until when.
- **Scheduled reminders** (same commands): ID of the targeted member or role and of the author, message, next sending date and frequency.

Server configuration

IDs of the configured servers, channels and roles, the server's invite, and the ID of the administrator who set the invite or the referee role.

Messages from the BlueGenji website

The website sends the Bot a Discord ID or username, the recipient's BlueGenji username, for the code only (login, certification or change of the Discord tag) the language of the BlueGenji account already linked to that Discord account (French or English, in which the Bot writes the code; without a linked account, the code is sent in French then in English), and the message to deliver (login code, match time or reminder, notice of removal from a match (“Match retiré”), check-in of a self-managed match sent to those who manage its entrants (or to the player of a solo entry), notice to a caster that someone else removed their registration for a match, referee alert, report; moderation notice — a report naming you, a team logo masked, removed, deleted or restored, an avatar hidden, removed or restored, the suspension of your account or its lifting —; join request for a team you manage; a team's invitation, the takeover of a ghost team the staff offers you or the ownership of your team transferred to you, which only name the team, never anyone; data-protection notice); the Bot delivers personal messages (code, match time, reminder, removal from a match, match check-in, removal of a cast, moderation notice, join request, team invitation, takeover or ownership, data-protection notice) by direct message **without storing them**; those about matches (time, reminder, removal from a match, match check-in, removal of a cast) only go to accounts with a Discord tag certified on the website — an uncertified tag, even one linked by signing in with Discord, receives none, to avoid spam; each recipient (player, member of an entrant or caster) can turn off those about their matches (time, reminder, removal from a match, match check-in, removal of a cast) in “My profile” on the website, and the same box turns off their team direct messages (join request, team invitation, takeover or ownership). Referee alerts and reports, which name no player (team names and tournament links only), are also posted in the staff's private log channel; referee alerts are also sent by direct message to the members of the referee role of every server that has set one (**/set-referee-role**), reports to the association's management. When a streamed match starts and ends, the website also sends the Bot the text of the evening's announcement (names of both teams — in a solo tournament, each player's public BlueGenji username, “a player” for an entry without an account, a deleted account or a registration made before 16 October 2026 —, tournament name, time, state and score of each match, stream link), which the Bot posts in the #live channel of the association's Discord server, in one message per evening (four hours from the first live stream) that lists the matches live, those scheduled until the end of the evening whose broadcast is set to open at their start time and those finished (“Terminé”, with their score), and that it edits at each match start and end, up to four hours after the evening ends (a new message without a mention takes over when it can no longer be edited), with an @everyone mention for the

association's official channel or a mention of the StreamViewer role only for any other channel. The website's direct messages are written in the language of the recipient's BlueGenji account, or as a single message in French then in English when it is not known (the association's leadership, members of the referee role, an unknown account), in French alone when both do not fit in one message; messages posted in channels stay in French. This processing falls under the website's privacy policy.

Logs

The public activity feed on the bot's page contains no Discord ID; it repeats the time, the server name and the level or role chosen with **/scrim** or **/recrute**. The staff's private log channel and the server logs receive the names of servers that add or remove the Bot, operating errors, which may mention a Discord ID, and the website's activity journal (sign-ups, matches, tournaments, account deletion requests — with, for an account announced in #live in a solo tournament, the tournament, the day and a time of each #live evening in which they may have appeared, so that the moderators delete by hand those of their AutoMod alerts they can identify — and their reactivation, “a player”), written by the website without any player's username. The Bot no longer writes usernames there on its own (messages older than this rule may quote some): the reason for an exclusion, free text written by the moderator, may quote one, and a failed direct-message delivery may mention the account concerned.

Member profiles

On every server where it is installed, Discord sends the Bot its members' profiles (username, nickname, avatar, roles, join and boost dates, timeout). The Bot holds them in memory, kept up to date by Discord, without ever recording them, to read the members it needs: memberships of the association, refereeing role, commands, delivery of the website's direct messages and finding the Discord account a code goes to. They are lost when the Bot stops.

Team voice channels for matches

In BlueGenji tournaments with that option, the Bot creates on the association's Discord server one voice channel per team of a match, under the name the website sends it (the team's name, see the website's messages above), returns to the website only that channel's ID, and deletes it once handed back and empty. It keeps a record of it: channel ID, key of the match and team (numbers, no name), creation and hand-back times. To know whether a channel is empty, it holds in memory at all times, whether or not a tournament has the option on, without ever recording it or sending it to the website, the voice state of the members of the association's server (Discord ID of the member and of their voice session, channel they are in, microphone or sound muted by themselves or by moderation, screen sharing or camera on, request to speak and stage suppression), with the member profile Discord attaches to it (including username, nickname, avatar and roles). It only uses it to know whether a channel is empty and, when the website's referees, or the team's owner, a manager or its captain, clear a team's channel, to disconnect all its occupants (the channel stays open): it keeps nothing of it, logs nothing of it and never tells the website how many people are in it, nor who. The channels are open to whoever sees the match category; Discord's audit log keeps the disconnections (their number and the clearing's reason, as Discord records them). The details are in the “Team voice channels” paragraph of the website's privacy policy (processing activity T18).

Legal basis

This processing is based on the association's **legitimate interest** (Article 6(1)(f) GDPR): running the relay between partner servers, moderating it and measuring its activity. Team voice channels also rest on its legitimate interest (smooth running of tournaments). Messages from the website rely on the legal basis of their original processing, set out in the website's register: legitimate interest for a player's match direct messages (time, reminders, “Match retiré”), the check-in of a self-managed match sent to those who manage its entrants (or to the player of a solo entry) and the notice sent to a caster whose registration someone else removes, which each of them objects to with the switch in “My profile” — the website keeps that choice under

a legal obligation (Article 6(1)(c) GDPR), to keep honouring that objection; legitimate interest (forming teams, the website's register T03) for team direct messages — join request, a team's invitation, offered takeover of a ghost team, transferred team ownership —, which anyone objects to with the same switch in “My profile”; performance of the service the player registers for, for their public username in the #live announcement of a solo tournament, and likewise for the AutoMod alert of such an announcement when blocked or flagged: when the player's account is deleted, the moderators delete by hand the alerts they can identify, with no guarantee that all are found.

03. Retention periods

- **Tracking of relayed advertisements** (IDs, date): 7 days; it is erased at the first relay after that deadline, and at the latest during the night or when the Bot restarts. The copies posted in partner channels remain on Discord (section 02).
- **Scrims and recruitment**: 30 days with the author's ID; at the clean-up of the following night (or a restart of the Bot), the author's ID is erased and the rows are folded into counts per day, server and level (or role), kept with no time limit as a history of the Bot's activity.
- **Exclusions**: the exclusion record, until it is lifted; the notice and the reason posted in the staff's private log channel, and the reason copied by direct message to the Bot's owner, are deleted when it is lifted. So is the notice sent by direct message to the excluded user; if Discord is temporarily unreachable, the ID of the excluded user and that of the message are kept to retry every night, for 30 days at most. A notice that Discord refuses to delete for good, or that is still there after those 30 days, is no longer retried and remains in the excluded user's direct conversation with the Bot, like a notice sent before the Bot kept its ID. For an exclusion issued before this rule, only the reason posted in the channel is: the rest follows the log channel's period (below).
- **Public activity feed** (time, server, level or role of each event): 30 days, deleted at the clean-up of the following night.
- **Server configuration** (relayed channels and their rank filters, the invite and the referee role with the ID of whoever set them, the Bot administration role, enabled modules): until the administrators remove it, and at the latest until the Bot leaves the server, which erases it. A departure while the Bot is down, which Discord does not notify, is caught up when it restarts.
- **Memberships and scheduled reminders**: until the reminder's last sending (for a membership, its expiry date) or its deletion, and at the latest until the Bot leaves the server where they were recorded, which erases them — including a departure while the Bot is down, caught up when it restarts.
- **Staff private log channel** (and the Bot's direct messages to its owner): one year (365 days); older messages from the Bot are deleted by the nightly clean-up, in batches (several nights for a large backlog), except the reason posted in the channel for an exclusion still in force — and, for an exclusion issued from this rule on, its notice and the copy of its reason by direct message —, deleted when it is lifted.
- **Team voice channels**: the channel is deleted as soon as it is empty once handed back, within 24 hours and 30 minutes of being handed back at the latest even if occupied, unless Discord prevents it; never handed back, it is deleted if it is empty 48 hours after its creation or its reuse; its record goes with it, or is forgotten 96 hours after its creation or its reuse if the Bot can no longer read the channel, and stays with no limit while a channel never handed back stays occupied or while Discord prevents its deletion (retried at each sweep; a channel the Bot no longer sees is left to moderation). These periods are accurate to within one sweep (every 30 minutes). A channel moved out of the match category is no longer tracked: its record is forgotten and the Bot no longer deletes it. Voice state and member profiles are only held in memory, kept up to date by Discord, and lost when the Bot stops. Discord's audit log keeps the creation and deletion of each channel, with its name, and the disconnections of a clearing (their number and reason, as Discord records them), for the period Discord sets.
- **Server logs**: according to their automatic rotation.

- **#live announcements** (evening message of the streamed matches: team names or, in a solo tournament, the players' public BlueGenji username): kept in the channel as long as it exists, even after the player's account is deleted; deleted at the request of the team, player or caster concerned (the website's “Report a problem” form, GDPR category). An announcement blocked or flagged by an AutoMod rule: its alert stays in the moderation alert channel; when the player's account is deleted (as soon as deletion is requested, the website tells the staff without naming the player), the moderators delete by hand the alerts they can identify, with no guarantee that all are found; it is not deleted on request otherwise.
- **Backups**: the Bot's database is backed up twice a week (Sunday and Tuesday evenings), encrypted, and each copy is permanently deleted after 30 days at most. A restore is made from these archives, decrypted on the Bot's machine: the database no longer travels through Discord; the copy of the previous database it leaves alongside is deleted at the next successful restore, and at the latest during the night after it turns 30 days old.

04. Recipients

- The association's staff, for moderating and administering the Bot.
- The Bot's owner (its technical host), who receives exclusion reasons by direct message.
- The excluded user, to whom the Bot sends the reason for their exclusion by direct message when they post an advertisement (a message naming a service) in a relayed channel.
- The members of the channel where **/scrim** or **/recrute** is used: the command replies publicly there, and Discord shows who used it.
- Members of partner servers, who read the relayed advertisements.
- Members of the referee role of every server that has set one, for the website's referee alerts.
- Members of the association's Discord server, who read the announcement of streamed matches in the #live channel.
- Members of the association's Discord server allowed in the match category, who see the team voice channels and their occupants, and its administration, which reads in Discord's audit log the creation and deletion of each channel, with its name, and the disconnections of a clearing.
- Moderators of the association's Discord server: if a Discord AutoMod rule blocks or flags a #live announcement, its text (including the public username in a solo tournament) may reach the server's moderation alert channel.
- The administrators of any server where the Bot is installed, and the holders of the Bot administration role each server designates (**/set-bot-admin**), who can read the list of exclusions (**/ban-list** command, reply visible only to the person who asked).
- The technical host, Keryan Houssin, the association's technical manager, who runs the Bot on their own machine (a Raspberry Pi in Caen, France) on the association's behalf: no hosting service provider, so they are not a processor.
- Discord, the platform the Bot runs on.
- Hetzner Online GmbH (Germany), which stores the backups, encrypted before upload with keys Hetzner does not hold, within the European Union: processor, under Hetzner's data processing agreement accepted by the association's technical manager.
- Microsoft, which hosts the technical host's personal mailbox (Outlook.com), through which any request about your data that you email to them, and their emailed reply, pass without encryption by the association, readable by Microsoft.
- The technical host's phone operator, if you call them or leave them a text or voicemail about your data.

- No data is sold, or handed over to any recipient other than those listed here.

05. Transfers outside the European Union

- **Discord** (United States): European Commission adequacy decision (EU) 2023/1795 of 10 July 2023 (EU-U.S. Data Privacy Framework).
- **Microsoft**: possible transfer to the United States, as Microsoft does not guarantee the storage location of a personal account; a request emailed to the technical host, and their emailed reply, reach it without encryption by the association, and so readable by Microsoft — European Commission adequacy decision (EU) 2023/1795 of 10 July 2023 (EU-U.S. Data Privacy Framework).
- Since 1 October 2026, backups are sent to Hetzner, in Germany: they are not transferred outside the Union.

06. Your rights

You have the following rights over your data:

- **Access**: find out what data the Bot keeps about you and obtain a copy.
- **Rectification**: have inaccurate data corrected.
- **Erasure**: have your data deleted; some Bot features may then no longer be available to you.
- **Restriction**: have the use of data frozen while a dispute is examined.
- **Objection**: object, on grounds relating to your particular situation, to processing based on legitimate interest. A player's username in the #live announcement of a solo tournament is not covered: it rests on performance of the service they register for — not being named in it means not registering; a past announcement is deleted on request (the website's “Report a problem” form, GDPR category). Nor is the site's keeping of your match and team direct messages choice: it rests on a legal obligation, that of continuing to honour your objection to those messages.

The right to data portability does not apply to the Bot's own processing: it is based on legitimate interest, not on consent or a contract; for the website's messages it delivers, see the website's privacy policy. To exercise your rights, use the means listed in the Contact section; you will receive a reply within one month.

If you consider that your rights are not respected, you may lodge a complaint with the CNIL, the French data protection authority.

07. Security

- The Bot's database lives on the technical host's machine, access to which is restricted to the technical manager (SSH key authentication).
- Exchanges between the website and the Bot stay on that machine and are protected by a token.
- Backups are encrypted on that machine before any upload.

No measure makes a system infallible: in the event of a data breach likely to put you at risk, the association is required to notify the CNIL and, if the risk is high, the people concerned (Articles 33 and 34 GDPR).

08. Changes to this policy

This policy may change along with the Bot. The version in force is the one published on this page, with its update date; significant changes are announced on the association's Discord server.

09. Contact

For any question about your data or to exercise your rights:

- Person to contact for requests about your data: **Keryan Houssin**, the website's technical host — email address and phone number in the website's privacy policy. This person is not a data protection officer within the meaning of Article 37 GDPR: the association remains the data controller. This processing (legal basis, data, retention period) is described in the website's privacy policy; its recipients and transfers are also listed in sections 04 and 05 of this policy
- The **“Report a problem”** form at the bottom of every page of the site (“GDPR” category for your data)
- The association's email address and phone number: see the legal notice

Hosting

The bot and the website run on the same machine, a Raspberry Pi in Caen, France, provided and administered by their technical host, Keryan Houssin. The host's full details are set out in the website's legal notice.

See the Hosting section of the legal notice
